HOW TO CLEAN PEDS SAFELY

COVID-19 advice for customers

Card transactions are more hygienic and efficient than cash transactions. To minimise the risk of spreading COVID-19, PEDs should be cleaned on a regular basis.

Use a damp microfiber cloth to wipe the exterior of the PED. Make sure to wring out excess water before using the cloth.

Avoid the inside of the card slot, the inside of the magstripe reader and the cable ports.

Use alcohol wipes or spray alcohol-based cleaner on a microfiber cloth to gently wipe the exterior of the PED.

Allow the PED to dry completely before using it.

Never spray cleaning liquids directly on to the PED. Do not use other cleaning products or solvents and do not use abrasive sponges to clean your PED.
